# Bachelor Of Engineering (Naval Architecture & Offshore Engineering) with Honours

## ADMINISTRATION TEAM

Position	Name
Chair	Professor Dr. Mohd Hasbullah Idris <a href="mailto:hasbullah@utm.my">hasbullah@utm.my</a> 07-5534567
Associate Chair (Academic and Student Development)	Professor Dr. Izman Sudin <a href="mailto:izman@utm.my">izman@utm.my</a> 07-5557051
Associate Chair (Research and Academic Staff)	Assoc. Prof. Dr. Zaini Ahmad <a href="mailto:azaini@utm.my">azaini@utm.my</a> 07-5557048
Associate Chair (Quality and Strategy)	Assoc. Prof. Dr. Haslinda Mohamed Kamar <a href="mailto:haslinda@utm.my">haslinda@utm.my</a>
Associate Chair (Continuous Education and TNE)	Dr. Engku Mohammad Nazim Engku Abu Bakar <a href="mailto:nazim@utm.my">nazim@utm.my</a>
Associate Chair (Facility)	Assoc. Prof. Dr. Mohamed Ruslan Abdullah <a href="mailto:ruslanabdullah@utm.my">ruslanabdullah@utm.my</a>
Director (Applied Mechanics & Design)	Assoc. Prof. Dr. Mohd Yazid Yahya <a href="mailto:yazidyahya@utm.my">yazidyahya@utm.my</a> 07-5557044
Director (Aeronautics, Automotive & Ocean Engineering)	Assoc. Prof. Dr. Pakharuddin Mohd Samin <a href="mailto:pakhar@utm.my">pakhar@utm.my</a> 07-5557043

Director (Materials, Manufacturing & Industrial Engineering)	Assoc. Prof. Dr. Muhamad Azizi Mat Yajid <a href="mailto:azizi@utm.my">azizi@utm.my</a> 07-5557038
Director (Thermal Fluids)	Dr. Aminuddin Saat <a href="mailto:aminuddin@utm.my">aminuddin@utm.my</a> 07-5557036

## **BACHELOR OF ENGINEERING (NAVAL ARCHITECTURE & OFFSHORE ENGINEERING) PROGRAMME SPECIFICATION**

The Bachelor of Engineering (Naval Architecture & Offshore Engineering) is offered on a full-time basis at the UTM Main Campus in Johor Bahru. The duration of study for the programme is subjected to the student's entry qualifications and is between four (4) years to a maximum of six (6) years.

The programme is based on a 2-Semester per academic session. Generally, students are expected to undertake courses equivalent to between fifteen (15) to eighteen (18) credit hours per semester. Assessments are based on courseworks, assignments, projects and final examinations given throughout the semester. Description of the programme is provided below.

1.	Programme Name	<b>Bachelor of Engineering (Naval Architecture and Offshore Engineering) with Honours</b>
2.	Final Award	Bachelor of Engineering (Naval Architecture and Offshore Engineering) with Honours
3.	Awarding Institution	Universiti Teknologi Malaysia
4.	Teaching Institution	Universiti Teknologi Malaysia
5.	Professional or Statutory Body of Accreditation	Engineering Accreditation Council (EAC)
6.	Language(s) of Instruction	Bahasa Melayu and English
7.	Mode of Study (Conventional, distance learning, etc.)	Conventional
8.	Mode of Operation (Franchise, self-govern, etc.)	Self-govern

9.	<b>Study Scheme (Full Time / Part Time)</b>	<b>Full Time</b>
10.	<b>Study Duration</b>	<b>Minimum : 4 years</b> <b>Maximum : 6 years</b>
	<b>Type of Semester</b>	<b>No of Semesters</b>
	<b>Normal</b>	<b>8</b>
	<b>Short</b>	<b>1</b>
		<b>No of Weeks/Semester</b>
		<b>14</b>
		<b>8</b>
11.	<b>Entry Requirements</b>	<b>Matriculation/STPM/Diploma or equivalent</b>
<b>12. Programme Objectives (PEO)</b> <ul style="list-style-type: none"> <li>(i) Demonstrate academic and technological excellence professionally and globally, particularly in areas related to naval architecture and offshore engineering practices and contribute innovatively to the nation's wealth creation.</li> <li>(ii) Career advancement by achieving higher levels of responsibility, leadership and acquiring professional and advanced academic qualifications.</li> <li>(iii) Recognize and practice professional, ethical, environmental and societal responsibilities and value different global and cultural aspects of their work and society.</li> <li>(iv) Adapt and communicate effectively and be successful working with multi disciplinary teams.</li> </ul>		
<b>13. Programme Learning Outcomes (PO)</b>		
<b>(a) Technical Knowledge and Competencies</b>		
<b>Intended Learning Outcomes</b>	<b>Teaching and Learning Methods</b>	<b>Assessment</b>
<b>PLO1</b>		
Acquire and apply fundamental knowledge of mathematics, science and engineering principles to solve complex naval architecture and offshore engineering problems;  Keywords: <b>Engineering Knowledge</b>	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem – based learning.	Examinations, laboratory reports, seminar presentations, problem – based exercises, individual and group project reports.
<b>PLO2</b>		
Identify, formulate and analyse complex naval architecture and offshore engineering problems;  Keywords: <b>Problem Analysis</b>	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem – based learning.	Examinations, laboratory reports, seminar presentations, problem – based exercises, individual and group project reports.

PLO3		
Design solutions for complex naval architecture and offshore engineering problems that fulfil health, safety, societal, cultural and environmental needs;  Keywords: <b>Design/Development of Solutions</b>	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem-based learning.	Examinations, laboratory reports, seminar presentations, problem-based exercises, individual and group project reports.
PLO4		
Investigate complex naval architecture and offshore engineering problems using research-based knowledge and methods to produce conclusive results;  Keywords: <b>Investigation</b>	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem-based learning.	Examinations, laboratory reports, seminar presentations, problem-based exercises, individual and group project reports.
PLO5		
Use modern engineering and information technology (IT) tools in complex naval architecture and offshore engineering activities, with an understanding of limitations;  Keywords: <b>Modern Tools Usage</b>	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem-based learning.	Examinations, laboratory reports, seminar presentations, problem-based exercises, individual and group project reports.
(b) Generic Skills		
Intended Learning Outcomes	Teaching and Learning Methods	Assessment
PLO6		
Apply professional engineering practice and solutions to complex naval architecture and offshore engineering problems related to societal, health, safety, legal and cultural issues with full responsibility and integrity;  Keywords: <b>The Engineer and Society</b>	Lectures, tutorials, seminars, group projects and industrial training.	Industrial training and group project reports.

PLO7		
Evaluate the sustainability and impact of professional engineering work in the solutions of complex naval architecture and offshore engineering problems in societal and environmental contexts.  Keywords: <b>Environment and Sustainability</b>	Tutorials, laboratory works, group assignments and projects, final year project presentations and problem-based learning.	Group reports, learning logs/diaries and oral presentations.
PLO8		
Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice;  Keywords: <b>Ethics</b>	Lectures, tutorials, seminars, group projects and industrial training.	Industrial training and group project reports.
PLO9		
Communicate effectively on complex naval architecture and offshore engineering activities both orally and in writing;  Keywords: <b>Communication</b>	Seminars, assignments and final year projects.	Report and theses.
PLO10		
Work productively as an individual, and as a member or leader in a team that may involve multi-disciplinary settings;  Keywords: <b>Team Working</b>	Lectures and project assignments.	Demonstrations, reports, tests, examinations and presentations.
PLO11		
Undertake life long learning and manage information including conducting literature study;  Keywords: <b>Life Long Learning</b>	Lectures and project assignments.	Demonstrations, reports, tests, examinations and presentations.

PLO12			
Demonstrate and apply knowledge on finance and management principles and acquire entrepreneurship skill;  Keywords: <b>Project Management, Finance &amp; Entrepreneurship</b>	Lectures and project assignments.	Demonstrations, reports, tests, examinations and presentations.	
<b>14. Classification of Courses</b>			
No.	Classification	Credit Hours	Percentage
i.	School Core Courses	62	45
ii.	Programme Core Courses	51	37
iii.	Programme Elective Courses	2	2
iv.	University Courses	23	16
<b>Total</b>		<b>140</b>	<b>100</b>
Classification of courses for engineering programme			
A	Engineering Courses	117	84
	<b>Total credit hours for Part A</b>	<b>117</b>	
B	Non – Engineering Courses	23	16
	<b>Total credit hours for Part B</b>	<b>23</b>	
<b>Total credit hours for Part A and B</b>		<b>140</b>	<b>100</b>
<b>15. Total Credit Hours to Graduate</b>		<b>140</b>	

## **AREAS OF STUDY**

Naval Architecture and Offshore Engineering are two important sectors in the maritime industry. The area of studies includes the design and system design, operations, performance and dynamic behaviour of marine vehicles such as ships, and also other marine structures fixed or floating. The curriculum has about forty five percents (45%) containing basic engineering courses such as Statics, Dynamics, Thermodynamics, Fluid Mechanics, and Mechanics of Materials. Naval architecture and offshore engineering related courses are about forty percents (40%). The courses are introduced as early as in the first semester and more courses are offered towards the end of the study period. The specialised courses for Naval Architecture and Offshore Engineering include:-

### **a) Naval Architecture**

Naval Architecture is a study which introduces students to basic naval architectural knowledge. It enable students to familiarise themselves with naval architectural terms, ship components and undertakes simple hydrostatics and stability calculations. Tools and techniques which are required in future naval architecture work are introduced here. Students will be able to carry out calculations to determine ship stability in all conditions. The content covers calculation of areas, moments and centroids, transverse stability, longitudinal stability, large angle stability, damage stability, launching.

### **b) Marine Hydrodynamics**

Basic knowledge of marine hydrodynamics theory and CFD software are introduced. Enhancement of knowledge in Mechanics of Fluids I started with some discussion on motion of Viscous/Real fluid and an Ideal fluid. Further discussion are also given in surface waves and hydrodynamic of slender bodies.

c) **Ship and Offshore Structures**

Ship and Offshore Structures concerns with the knowledge on loading and stresses of ship and offshore structure. It begins with the components and functions on ship and offshore structures. The floating hull loading, shear forces and bending moments will then discuss in detail. The important structural strength analysis for ship and offshore structures will be highlighted on bending and buckling afterward.

d) **Ship and Offshore Production Technology**

Ship and Offshore Production Technology study is essential as it prepare the student with the basic knowledge and exposure on construction process of ship & offshore structures. This course covers the hardware and software aspects of ship and offshore production technology. It begins with the introduction to ship building industry, its importance and development in world economics and in Malaysia, ship and offshore/production construction process flow chart and activities. Production/construction yards location, layout and facilities. Material treatment including surface preparation, cutting process, welding and painting process which involve in the construction process. It followed by subassembly, block assembly and erection process of offshore structures. Upon completion, launching, transporting and upsetting process will also be discussed. On the soft engineering side, the quality control and production system will also be taught. Apart from normal lecture hours, the students are expected to carry out class assignment, field surveys or site visits to ship and offshore production yards and technical writing. Therefore, the course is expected to develop and enhance the students' ability to discuss and explain the related knowledge, to work in team effectively, long life learning and communication skills.

e) **Integrated Ship and Offshore Design Project**

The course firstly explains the concepts of engineering design and later relates them to the process and procedures in ship and offshore design. Emphasis is made on preliminary design calculations to satisfy owner's requirements and related

legislations. The hands on part will deal with design tasks, including hull form design (manually and computer aided), hydrostatics calculation and General Arrangement.

In terms of design, the students will be given areal design job and working as consultant group to closely replicates the real ship and offshore design practice. Designing ship hull forms and its related general arrangement to serve its functions done previously, this course also continuing the necessary design tasks including Stability Calculation and Assessment, Scantling Calculation and Strength Assessment, and Shell Expansion & material take off. This course emphasis is Handson Design Project works (in group) with continuous monitoring from the lecturer. Apart from providing the necessary technical knowledge and skills the course also aimed at developing the necessary generic skills such as team working, oral and written presentation skills, project management skills etc. The contents and conduct of the design project areas much as possible tailored to the real design practice in industry.

f) **Marine and Offshore Engineering Systems**

The course covers the main engineering systems of the ship and offshore structure machinery. This includes the propulsion and auxiliary systems. Selected analysis of the thermodynamic processes of the system, description of the plant main components, operating principles and plant performances will be studied. This includes the marine diesel engine and steam turbine power plant, electric and hydraulic power systems. Other important support system such as air conditioning, fire, condition and Performance monitoring system will also be covered.

g) **Marine Transport Economic**

The course focuses on delivering knowledge to students on two aspects of maritime transport and economics. Firstly is on the basic definitions and process for the efficient operation of global port and shipping operations. Secondly is on the basic definition for the economics of port and shipping operations up to the concepts for appraising investment and financial performance. Additional knowledge is also given to students on the current issues influencing the world maritime scenario. The topics selected are globalization, technology and knowledge while addressing environmental issues.

#### h) **Marine Management, Environment and Safety**

This course aims to prepare students with knowledge on basic principles of management, project management, marine environment and safety. The management part will examine key issues in management and organization, past and present management, strategic management, organizational structure and design, human resource management, motivating employees and leadership. Project management shall cover network analysis, resources constrained project, crash time and project performance and risk assessment. Main topics covered under environment and safety will be IMO, MARPOL, SOLAS and the like. OSHA1994, Factories and Machinery Act 1967 shall also be mentioned. Safety topics cover hazard identification, risk assessment and control, basic principles of accident prevention and occupational health. At the end of the course, students should be able to describe fundamental aspects of management, integrate knowledge in engineering and management in making business decisions, apply the principles of hazard identification, risk assessment/control, plan, design and implement an effective safety program.

#### i) **Ship Resistance and Propulsion**

This course introduces students to ship hydrodynamics, dimensional analysis, fundamental of ship resistance and its components, fundamental of ship model testing and extrapolation methods and marine propulsors. The course also includes propeller theories, methods of propeller design and the study of cavitation phenomena together with the analysis of propeller-engine matching.

## **CAREER PROSPECTS**

Graduates of this programme are essentially Naval Architects, but with applied knowledge on offshore engineering. They could be registered with the Board of Engineers Malaysia (BEM) under the category of Naval Architect and join the Institute of Engineers Malaysia (IEM).

The Maritime Industry encompasses all forms of maritime activity and can be divided into several segments namely, Shipbuilding & Ship Repair, Offshore Structure and Vessels Fabrication, Ocean & Coastal Shipping Port Services, Marine Professional Services, Maritime Defence and Law Enforcement, Government Authorities & Marine/Maritime Associations, Marine and Inland Fishing, Marine Tourism, Marine Mining, Marine Environment and Marine Products & Services.

There are excellent employment opportunities in all of these segments of the maritime industry.

Naval Architects have a wide range of employment opportunities, not limited to areas such as Ship and Offshore Vessel Design, Construction and Repair, Consultancy, Marketing and Sales, Operations, Regulation, Surveying and Overseeing, Research and Development and also in the Education and Training sector.

Naval Architects and Offshore Engineers play a vital role in the delivery of the many complex and challenging projects being developed. This is possible since they have the ability to model and solve a problem, describe and deliver an economical solution and then supervise and manage the work through to completion. The end product needs to be feasible, economical, safe, delivered on time, as well as respectful to the environment. All of these require a special combination of aptitude, vision and commitment.

Each type of work has its own distinctive character and offers opportunities for initiative and imagination in a wide variety of technical and managerial posts as well as opportunities for foreign travel. The workplace may be a large company, a small group, a consultancy or a government department.

## Award Requirements

To graduate, students must:

- Attain a total of not less than 140 credit hours with a minimum CGPA of 2.00.
- Has passed all specified courses.
- Has applied for graduation and has been approved by the University.
- Has completed all four (4) short courses and one (1) test in UTM Professional Skills Certificate Programme.
- Other condition as specified.

## Entry Requirements

The minimum qualifications for candidates who intend to do a Bachelor of Engineering (Naval Architecture & Offshore Engineering) are as follows:

1. Minimum results based on **the Malaysian High School Certificate (STPM)** (results would be based on the general requirements as well as other conditions as the pre-requisites for the programme set by the university).

### University General Requirements:

- i. Passed Malaysian Certificate Examination (SPM) or its equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or a credit in Bahasa Melayu/Bahasa Malaysia, July Paper.
- ii. Passed the Malaysian High School Certificate (STPM) or its equivalent and obtained the following:
  - a) **Grade C (NGMP 2.00)** General Studies/General Paper, and
  - b) **Grade C (NGMP 2.00)** in two (2) other subjects
- iii. Passed the Malaysian University English Test (MUET) with minimum result of **Band 1**.

### Programme Specific Requirements

- i. Obtained a **CGPA of 2.80**; and Passed with a minimum **Grade B- (NGMP 2.67)** in two (2) of the following subjects:
  - a) Mathematics T / Further Mathematics
  - b) Physics or Chemistry
- ii. Passed with at least a **Grade C** in Mathematics and Physics in the SPM level or equivalent.
- iii. Passed the Malaysian University English Test (MUET) with minimum result of **Band 2**.
- iv. Do not have any health problems that may affect their studies.

2. Minimum requirements for **Matriculation Certificates (KPM) / UM Science Foundation / UiTM Foundation** (fulfil the general requirements set by the university as well as other conditions of the programme).

#### General University Requirements

- i. Passed Malaysian Certificate Examination (SPM) or its equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or a credit in Bahasa Melayu/Bahasa Malaysia, July Paper.
- ii. Passed the Matriculation Certificates (KPM) / UM Science Foundation / UiTM Foundation with a minimum **CGPA of 2.00** and passed all the core subjects.
- iii. Passed the Malaysian University English Test (MUET) with minimum result of **Band 1**.

#### Programme Specific Requirements

- i. Obtained a **CGPA of 2.80**; and Passed with a **Grade B- (2.67)** in two (2) of the following subjects:
  - a) Mathematics / Engineering Mathematics
  - b) Physics / Engineering Physics or Chemistry / Engineering

## Chemistry

- ii. Passed with at least a **Grade C** in Mathematics and Physics in the SPM level or equivalent.
- iii. Passed the Malaysian University English Test (MUET) with minimum result of **Band 2**.
- iv. Do not have any health problems that may affect their studies.

3. Minimum qualifications for students with **Certificates/Diplomas** (fulfil the general requirements set by the university as well as specific requirements of the programme).

### General University Requirements

- i. Obtained a Diploma or equivalent qualification recognised by the Malaysian Government and approved by the Senate.

or

- ii. Passed STPM examination in 2016 or before and obtained at least:
  - a) **Grade C (NGMP 2.00)** General Studies/General Paper, and
  - b) **Grade C (NGMP 2.00)** in two (2) other subjects

or

- iii. Passed the Matriculation Certificates (KPM) / UM Science Foundation / UiTM Foundation in 2017 or before and obtained minimum **CGPA of 2.00**.
- iv. Passed the Malaysian University English Test (MUET) with minimum result of **Band 1**.
- v. Passed Malaysian Certificate Examination (SPM) or its equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or a credit in Bahasa Melayu/Bahasa Malaysia, July Paper.

### Programme Specific Requirements

- i. Obtained a Diploma in Mechanical Engineering from UTM or equivalent with minimum **CGPA of 2.75**.

or

- ii. For those who obtained a **CGPA of less than 2.75** but have at least **two (2)** years working experience in related field are eligible to apply.

or

- iii. Meet the minimum entry requirements as required for STPM holders.

or

- iv. Meet the minimum entry requirements as required for those who have completed the Matriculation Certificates (KPM) / UM Science Foundation / UiTM Foundation.

- v. Passed with at least a **Grade C** in Mathematics and Physics in the SPM level or equivalent.

or

- vi. Obtained at least a **C Grade (2.00)** in any one of the Mathematic courses at Diploma level.

- v. Passed the Malaysian University English Test (MUET) with minimum result of **Band 2**.

- vii. Do not have any health problems that may affect their studies.

**Note:**

Candidates are required to submit the results transcript of all their examinations taken during their Diploma study (semester one until the final semester) to UTM. A copy of the diploma or a letter of completion of study will also have to be submitted together with their applications.

**Year of entry and duration of study will be based on the credit exemptions approved by the UTM.**

## Programme Educational Objectives (PEO)

After having exposed to 3 to 5 years working experience, our graduates should become professionals who demonstrate the following competencies:

Code	Intended Educational Objectives
PEO1	Demonstrate academic and technological excellence professionally and globally, particularly in areas related to naval architecture and offshore engineering practices and contribute innovatively to the nation's wealth creation.
PEO2	Career advancement by achieving higher levels of responsibility, leadership and acquiring professional and advanced academic qualifications.
PEO3	Recognize and practice professional, ethical, environmental and societal responsibilities and value different global and cultural aspects of their work and society.
PEO4	Adapt and communicate effectively and be successful working with multi disciplinary teams.

## Programme Learning Outcomes (PLO)

After having completed the programme, graduates should be able to demonstrate the following competencies:

Code	Intended Learning Outcomes
PLO 1	<p>Ability to acquire and apply fundamental knowledge of mathematics, science and engineering principles to solve complex naval architecture and offshore engineering problems;</p> <p>Keywords: <b>Engineering Knowledge</b></p>
PLO2	<p>Ability to identify, formulate and analyse complex naval architecture and offshore engineering problems;</p> <p>Keywords: <b>Problem Analysis</b></p>
PLO3	<p>Design solutions for complex naval architecture and offshore engineering problems that fulfil health, safety, societal, cultural and environmental needs;</p> <p>Keywords: <b>Design/Development of Solutions</b></p>
PLO4	<p>Investigate complex naval architecture and offshore engineering problems using research-based knowledge and methods to produce conclusive results;</p> <p>Keywords: <b>Investigation</b></p>
PLO5	<p>Use modern engineering and information technology (IT) tools in complex naval architecture and offshore engineering activities, with an understanding of limitations;</p> <p>Keywords: <b>Modern Tools Usage</b></p>
PLO6	<p>Apply professional engineering practice and solutions to complex naval architecture and offshore engineering problems related to societal, health, safety, legal and cultural issues with full responsibility and integrity;</p> <p>Keywords: <b>The Engineer and Society</b></p>
PLO7	<p>Evaluate the sustainability and impact of professional engineering work in the solutions of complex naval architecture and offshore engineering problems in societal and environmental contexts.</p> <p>Keywords: <b>Environment and Sustainability</b></p>
PLO8	<p>Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice;</p>

	Keywords: <b>Ethics</b>
PLO9	Communicate effectively on complex naval architecture and offshore engineering activities both orally and in writing;  Keywords: <b>Communication</b>
PLO10	Work productively as an individual, and as a member or leader in a team that may involve multi- disciplinary settings;  Keywords: <b>Team Working</b>
PLO11	Undertake life long learning and manage information including conducting literature study;  Keywords: <b>Life Long Learning</b>
PLO12	Demonstrate and apply knowledge on finance and management principles and acquire entrepreneurship skill;  Keywords: <b>Project Management, Finance &amp; Entrepreneurship</b>

### **PROFESSIONAL SKILLS CERTIFICATE (PSC)**

Students are required to enrol in certificate programmes offered by the Centres of Excellence in the University and the School of Professional and Continuing Education (SPACE) during the duration of their studies in UTM. The four (4) short courses and one test are as follows:

1. How to Get Yourself Employed (HTGYE)
2. ISO 9001: 2008 Quality Management System Requirement (ISO)
3. Occupational Safety and Health Awareness (OSHA)
4. How to Manage Your Personal Finance (HTMYPF)
5. Test of English Communication Skills for Graduating Students (TECS):
  - (i) TECS 1001 (Paper I – Oral Interaction)
  - (ii) TECS 1002 (Paper II - Writing)

## **MOBILITY PROGRAMME (OUTBOUND)**

Universiti Teknologi Malaysia (UTM) is offering five (5) types of mobility programs which allow UTM Student to go abroad and join academic programs in universities, institutions or organizations in all over the world. The opportunities offered are as below:

### **1. Study Abroad / Student Exchange**

Study Abroad/Student Exchange programme is a programme which allow student to spend one or two semesters at universities abroad and take courses in regular semester with credit transfer opportunity.

### **2. Research Internship Abroad**

Research Internship is a program which allow student to join research study or internship under the supervision of an academic staff at universities or industries abroad from all over the world.

### **3. Global Outreach Programme (GOP)**

GOP is a 7 to 14 days academic based program to experience various cultures in other countries. It includes immersion elements such as research & academic activities, social responsibility and cross cultural activities.

### **4. International Invitation Programme**

Students participate in program organised by international institutions/ organisations with the following themes:

- (i) Seminar, Conference or Paper Presentation
- (ii) Cultural Exhibition and Conference
- (iii) Student Development Activity

### **5. Summer School Abroad**

Summer School program is a program which is designed to provide educational opportunities in 4 to 8 weeks during summer holiday abroad. It is related to environment, local community, heritage and tradition.

Details and appropriate forms and procedures can be reached at **UTM International link:** <http://www.utm.my/international/outbound-mobility-programs/>

## **COURSE SYNOPSIS**

### **COURSE SYNOPSIS FOR B. ENG (NAVAL ARCHITECTURE AND OFFSHORE ENGINEERING)**

#### **SEMO 1503 Ship Engineering Drawing**

This course introduces students to the basic of ships and engineering drawing knowledge. It enables students to apply their skills and knowledge of engineering drawing to understand any design via geometric drawing, orthographic projection, isometric and production drawing. Meanwhile, in ship drawing parts, the student will be able to interpret a hull formation through lines plan drawing which consists of body, half breadth and sheer plan projection. Basic terminologies which related to naval architecture and ship drawing will be highlighted in this

course.

### **SEMO 1332 Naval Architecture I**

In this course, students will continue to learn basic naval architecture knowledge. For this subject, students are exposed on how to use the ship particulars and lines plan data in calculating the hydrostatic particulars of a ship. Students are introduced to the methods of hydrostatics and stability calculations. Students are then introduced to design concept as they are required to use their naval architecture knowledge to design an object for floating structure design competition. The subject contents also include the introduction to ship general arrangement. The course includes hands-on individual and group projects

### **SEMO 1922 Introduction to Naval Architecture and Offshore Engineering**

The course comprises two parts intended to introduce students to the field of naval architecture and offshore engineering. The first part raises the students' awareness on the importance and necessity in developing systematic approach for solving naval architecture and offshore engineering problems. It introduces the importance of some generic skills to naval architects and offshore engineers. It also provides students an overview of the different fields within naval architecture and offshore engineering and a description of the naval architects and offshore engineer's work and professional responsibilities. The second part aims to expose students to the hands-on nature of basic engineering workshop skills.

### **SEMO 2123 Ship and Offshore Structure I**

This course is concerned with the knowledge on loading and stresses of ship and offshore structure. It begins with the components and functions on ship and offshore structures. The floating hull loading, shear forces and bending moments are then in detail discussed. The important structural strength analysis for ship and offshore structures will be highlighted on bending and buckling afterward.

### **SEMO 2713 Ship & Offshore Production Technology**

This course is essential as it prepare the student with the basic knowledge and exposure on construction process of ship & offshore structures. This course covers the hardware and software aspects of ship and offshore production technology. It begins with the introduction to shipbuilding industry, its importance and development in world economics and in Malaysia. Ship and offshore /production construction process flow chart and activities. Production/construction yards location, layout and facilities. Material treatment including surface preparation, cutting process, welding, painting process etc. that involve in the construction process. It followed by sub assembly, block assembly and erection process of offshore structures. Upon completion, Launching, transporting and upsetting process will also be discussed. On the soft engineering side, the quality control and production system will also be taught. Apart from normal lecture hours, the student is expected to carry out class assignment, field survey or site visits to ship and offshore production yards and technical writing. Therefore, the course is expected to develop and enhance the student ability to discuss and explain the related knowledge, to work in team effectively, long life learning and communication skills.

### **SEMO 2343 Marine Hydrodynamics**

This course start with enhance the knowledge in fluid mechanic with discussion on the motion of Real fluid and Ideal fluid. Basic knowledge of marine hydrodynamics theory and general concept of numerical approach in simulate the flow around floating body are introduced in this course. Further discussions are also given in surface waves and various hydrodynamic problems. The hydrodynamic coefficients such as added mass coefficient, damping coefficient and wave loading are defined. Brief discussion is also given on the motion of floating body in regular wave by related to the hydrodynamic coefficients of the floating body.

### **SEMO 3133 Ship and Offshore Structure II**

This course is divided into three main areas, namely ship/platform topside vibration, finite element methods and underwater structural failure. In the vibration it starts with introduction to the structural vibration, free vibration and forced vibration. It is then followed by the vibration calculation in ships and platform topside structure. Method of determining vibration characteristics and reducing vibration are given for design practices. FEM covers the analysis of statically indeterminate structure by the direct stiffness method of truss, beam and plane frames. The students are also required to carry out building frame project using FEM software. In the underwater structural failure, it reviews the various modes of structural failure and highlights the importance of fracture induced failure and contrasts it with the limited coverage given to fracture mechanics in underwater. This section will discuss some examples of well known failures/accidents attributed to cracking. Then, using a simple example we shall compare the failure load predicted from linear elastic fracture mechanics with the one predicted by classical strength of material. The ability to learn independently, working in team and interpret the results objectively will also be emphasized in this course.

### **SEMO 3033 Computational Methods in Ocean Engineering**

This course is designed to enhance the students' computational knowledge in simulating fluid flow and strength of floating structure. In the first half semester, the fundamental knowledge on computational fluid dynamic will be introduced to students. The course will enhance the basic knowledge that has been developed in the Marine Hydrodynamics and expose the students in analysing hydrodynamically the flow field. It will emphasize on the analysis and the importance of boundary layer, ideal and compressible flow in a practical engineering applications. The course will also provide the knowledge on analysis of flow through marine vehicle and structure. In the second half semester, the course will be focused in the computational solution to analysis the strength of floating structure. It start with discuss the external loading to the floating structure such as the effect of flow

and wave to the stress on the floating structure. After that, the course gives students an exposure to the theoretical basis of the finite element method and its implementation principles. The students will be applied the finite element method to develop the governing equation and solve the equation for the giving simple engineering problem. Besides, this part of the course also introduces the use of general purpose finite element software for solving real-life engineering problems. At the end of the course, students should be able to demonstrate and apply the theory to solve problem related to marine hydrodynamics.

### **SEMO 3333 Naval Architecture II**

This course introduces students to further naval architectural knowledge. It enables students to familiarise themselves with naval architectural terms ship components and undertakes hydrostatics and stability calculations. Students will be able to carry out calculations to determine ship stability in all conditions. The content covers calculation of areas, moments and centroids, transverse stability, longitudinal stability, large angle stability, damage stability and launching.

### **SEMO 3512 Ship and Offshore Design**

This course introduces the students to Ship and Offshore Design. It starts with the definition of design and spiral nature of ship design process. Four different stages of ship design will be discussed briefly but focusing more on basic ship design covering conceptual design and some of preliminary design stage. The contents of the course mainly cover the theory and governing principles used in basic ship design starting from understanding mission and owners requirement, followed by preliminary estimation of main dimensions, hull form properties and generation process, preliminary calculation of hydrostatics and stability and preliminary general arrangement of the ship. Some of the statutory requirements in design will also be discussed and finally method of estimating first cost of the ship will be introduced. Apart from the theoretical background, the student will also require to carry out hands on project (in group) to determine the main dimension and conceptual sketch of general arrangement of a ship based on the given design/owners requirements. This will provide them with the initial exposure and experience of applying the knowledge learned in theory to solve the real problem given.

### **SEMO 3523 Integrated Ship & Offshore Design Project I**

Integrated Ship and Offshore Design Project consists of two Parts run in two consecutive semesters (6 & 7 Sem). This course is the first parts of the IDP that requiring the students to carry out several basic ship design tasks. It covers the Hull form development of the ship based on the design requirements and main dimensions of the ship, General Arrangement design & Capacity calculation and Hydrostatics calculation and Stability Assessment. The result of the design works of this course will be used for following design tasks in the following semesters. The students working in group of three are expected to propose the ships and its main systems that able to deliver the intended design requirements (problem). The design tasks and the quality of the solution should reflect the real design works in industry. In carrying out the design task effectively, the students are expected to apply and integrate the knowledge learnt in the core courses and acquiring new knowledge on their own in order to solve the design problem correctly. Hence the PoPBL (Project Oriented Problem Based Learning) approach is adopted in this course. Apart from technical knowledge and design skills, the students will also be exposed to several generic skills such as team working and leadership skills, communication skills, project management.

### **SEMO 3353 Ship Resistance & Propulsion**

This course introduces students to ship hydrodynamics, dimensional analysis, fundamentals of ship resistance, ship resistance and its components and methods of determining ship total resistance. The course then introduces the fundamentals of ship model testing and extrapolation methods to full scale ships. The course discusses various marine propulsors and specifically the marine propeller. The course also includes the description of propeller geometrical features and its effect on propeller performance. Propeller theories, methods of propeller design and the study of cavitation phenomena together with the analysis of propeller-engine matching also discussed

### **SEMO 3813 Marine Transport & Economic**

This course focuses on delivering knowledge to students on two aspects of maritime transport and economics. Firstly, is on the basic definitions and process for the efficient operation of global port and shipping operations. Secondly is on the basic definition for the economics of port and shipping operations up to the concepts for appraising investment and financial performance. Additional knowledge is also given to students on the current issues influencing the world maritime scenario. The topics selected are globalization, technology and knowledge while addressing environmental issues.

### **SEMO 3915 Industrial Training**

Industrial training exposes students to the real work setting in various industries for 12 weeks. The students are placed in industries that best suit their area of studies. It is an experiential learning which requires the students to learn the process and able to apply their knowledge acquired in class into actual industrial setting. The knowledge acquire during practical training may be used later in final year class as well as to equip them with sufficient knowledge for job interviews.

### **SEMO 4233 Dynamics of Marine Vehicles**

Marine vehicles and floating structures are built for transportation and also to perform various marine activities

such as fishing and offshore drilling. This course provides the knowledge of the characteristics of vessels/structures and the effect of the environment on their behaviour. The course begins with the introduction to effects of waves on vessels and structures. Since ocean waves are complex in nature, by incorporating linear wave theory, statistical methods can be adopted to study the irregular behaviour of waves and relate to vessels/structures motions characteristics. Some of the topics include; Introduction to seakeeping, and solving seakeeping in waves using strip theory. Introduction to manoeuvrability of vessels that are motions in the horizontal plane so that they can proceed on a straight path, turn or take other avoiding actions in calm water as well as in waves, wind and current. This course emphasises on the student's ability to identify and solve the behaviour marine vehicles/structures problems by carrying the necessary calculation and analysis.

#### **SEMO 4423 Marine and Offshore Engineering System**

The course covers the main engineering systems of the ship and offshore structure machinery. This includes the propulsion and auxiliary systems. Selected analyses of the thermodynamic processes of the system, description of the plant main components, operating principle and performances will be studied. This includes the marine diesel engine and steam turbine power plant, electric, drilling and hydraulic power system. Other important support system such as air conditioning, fire, condition and performance monitoring system will also be covered.

#### **SEMO 4533 Integrated Ship and Offshore Design II**

This is the second part of Integrated Ship & Offshore Design Project, continuation from the first part SEMO 3513. The students working in the same group as in part I are expected to continue the ship design tasks by performing structural design and strength assessment and addressing the sustainability aspect of the design in order to complete most of the tasks in preliminary design process. The design work continues with the Offshore Structures design which could be chosen between Semi-Submersible, TLP, FPSO etc. depending on the availability of data. The design tasks focus on structures configuration, Hydrostatics Calculation, Stability Assessment based on MODU, Seakeeping and Mooring Analysis and Structural Strength Assessment of the selected offshore structures. The design tasks and the quality of the solution should reflect the real design works in industry. In carrying out the design task effectively, the students are expected to apply and integrate the knowledge learnt in the core courses and acquiring new knowledge on their own in order to solve the design problem correctly. Hence the PoPBL (Project Oriented Problem Based Learning) approach is adopted in this course. Apart from technical knowledge and design skills, the students will also be exposed to several generic skills such as team working and leadership skills, communication skills and project management.

#### **SEMO 4262 Risers & Mooring Dynamics**

This course provides the design and installation operations of riser and mooring systems. Emphasis is made on design of deep-water moorings and riser system by the accepted industry practices and design codes and criteria. It starts with the types and layout of risers, layout and geometry of mooring and line types. Then the riser and mooring line design cycle is introduced and in this section the students calculate the environmental loads, pretension and static equilibrium, and vortex-induced-vibration (VIV), and analyze the static and dynamic performances including floater. The students also solve the dynamic performances of riser/mooring lines using simulation software (e.g. MOSES) and analyze the fatigue of riser and mooring chains.

#### **SEMO 4823 Engineering Management Environment & Safety**

This course aims to prepare students with knowledge on basic principles of management, project management, marine environment and safety. The management part will examine key issues in management and organization, past management and today, strategic management, organizational structure and design, human resource management, motivating employees and leadership. Project management shall cover network analysis, resources constrained project, crash time and project performance and risk assessment. Main topics covered under environment and safety will be IMO, MARPOL, SOLAS and the like. OSHA 1994, Factories and Machinery Act 1967 shall also be mentioned. Safety topics cover hazard identification, risk assessment and control, basic principles of accident prevention and occupational health. At the end of the course, students should be able to describe fundamental aspects of management, integrate knowledge in engineering and management in making business decisions, apply the principles of hazard identification, risk assessment/ control, plan, design and implement an effective safety program.

#### **SEMO 4912 Undergraduate Project I**

This course introduces the final year students on how to do academic research on their own by applying knowledge and skills they acquired from other courses. Given a topic on a project students have to identify a problem, gather relevant information to the problem and propose solutions to problems. In this course, students have to do some literature surveys in order to understand the nature of the problem and investigate work done by other researchers in line with their work. The students are also required to propose a methodology on how to solve the problems. By the end of this course, the students are expected to submit and present their research proposal to be assessed by their supervisors and panel of assessors.

#### **SEMO 4924 Undergraduate Project II**

This course is the continuation of Undergraduate Project (UGP) I. It enhances the students' knowledge and ability to identify and solve problems through academic research. It will provide an exercise for the student in carrying out research with minimum supervision and the ability to plan and manage their work effectively. This course will also develop the students' capability to present, discuss and analyze results of the research clearly, effectively and confidently in both oral presentation and in dissertation.

**SEMO 4951 Marine Laboratory**

This course is designed to enable the students to apply knowledge of seakeeping & motions in waves, manoeuvring, offshore structure tests in the laboratory works. The students need to seek information and prepare marine model experiments protocol and procedure. This course will train the students to prepare the experimental set up and conduct the marine model experiments. They are instructed to analyse the experimental result and deduce the appropriate conclusion. The students need to adopt team work to solve seakeeping & motions, manoeuvring, and self-propulsion tests. This course also develops the students' capability to present, discuss and analyse experimental results clearly, effectively and confidently in the oral presentations as well as in the written laboratory reports.

**ELECTIVE COURSES:**

Elective courses are offered to provide a wider area of study. Students can choose the courses according to their interest.

**SEMO 4012 Marine Meteorology and Oceanography**

This course gives an introduction to the courses of oceanography and marine meteorology. It explains the fluid physical characteristics and movement on the earth surface. As such, the student will have a clear understanding of the weather which results from the interaction between the atmosphere and the sea surface.

**SEMO 4132 Marine Control Engineering**

The course encompasses control engineering analysis and the vessel's auxiliary systems. This includes marine control engineering systems, hydraulic and electrical system. The students are expected to solve control engineering problems, analyse the performance and operation of marine control systems

**SEMO 4142 Reliability of Ship and Offshore Structures**

This course provides reliability of ship and offshore structure as the complement of the failure probability for a rational measure of safety in structural design. The course applies the reliability method which deals with the uncertain nature of loads, resistance, etc. and leads to assessment of the reliability. The reliability method is based on analysis models for the structure in conjunction with available information about loads and resistances and their associated uncertainties. These are introduced to the analysis models that are usually imperfect, and the information about loads and resistances is usually incomplete. At the end of the course, students should be able to calculate the reliability as assessed by reliability method that is generally not a purely physical property of the structure but rather a nominal measure of safety of the structure given a certain analysis model and a certain amount and quality of information.

**SEMO 4152 Platform Pipeline and Sub-Sea-Technology**

This course provides the concepts of offshore platform, submarine pipeline and subsea- technology, basic calculation on strength and fatigue, safety on fatigue life, reliability assessment, design issues, fabrication, installation and operations of offshore platform, submarine pipelines and risers, and also understanding of the equipment used in subsea developments.

**SEMO 4452 Marine Engineering System Project**

Marine Engineering System Project is designed for final year students to perform marine systems design. Students are required to specifically design a typical marine engineering systems for a chosen ship or offshore vehicles. Students are then required to integrate these systems together to form a workable compromise and fulfill the vessel's intended function. The students are expected to understand the design processes, operations and selection of the auxiliary systems. During the course of the subject students are required to have numerous discussions and presentations to complete the design. Implementation of this course is via group project.
